

### 4.3 Warm Up

1. Measure the angles.

a)

b)

2. Find the missing angle.

**Example:**

The sum of the angles in a triangle =  $180^\circ$ .  
 To find the missing angle, subtract the 2 given angles from  $180^\circ$ .  
 $x = 180 - 90 - 30$   
 $x = 60^\circ$

3. Divide.

a)  $\frac{64}{8} = \underline{\hspace{2cm}}$

b)  $\frac{62.4}{0.2} = \underline{\hspace{2cm}}$

4. Find the missing numbers.

a)  $\frac{\boxed{\hspace{1cm}}}{5} = 6$  6 =  $\frac{6}{1}$

b)  $\frac{28}{\boxed{\hspace{1cm}}} = 7$

5. Use equivalent fractions to complete each proportion.

a)  $\frac{18}{2} = \frac{\boxed{\hspace{1cm}}}{6}$

× \_\_\_\_\_

× \_\_\_\_\_

b)  $\frac{35}{14} = \frac{\boxed{\hspace{1cm}}}{2}$

÷ \_\_\_\_\_

÷ \_\_\_\_\_
