BLM 1–4 Chapter 1 Test

1. Theoretical probability is the chance of something happening in a perfect world. If you flip a coin 10 times, the theoretical probability of getting heads is $\frac{5}{10}$.

Experimental probability is the ratio of the number of times an event occurs compared to the total number of trials. If you flip a coin 10 times, you probably will not get 5 heads and 5 tails.

e)

Colour	Suit	Value	Card
1 : 1	1 : 3	1 : 12	1 : 51

5. Answers will vary.
6. a) Pick the Colour. In order to be fair, the payout should be the same as the number of ways of losing divided by the number of ways of winning, or, it should be the second number in the odds of winning ratio when the first number is 1.
b) Suit, 3; Value: 12; Card: 51
7. a) “The house” will win money while players will gradually lose money.
8. Answers will vary. Look for responses that explain why people choose to gamble.
