|------------|-------------------------|-----------|
| CHAPTER 3 | Atmosphere and Pressure | BLM 3.2.7 |
| ASSESSMENT | | |
| | | |

- What is the troposphere? Find the major and minor components of the troposphere. Assume dry air conditions.
- List four common units of pressure.
 - Convert 125 kPa to atm.
 - Convert 743 mmHg to kPa.
 - Convert 550 mmHg to bar.
 - Convert 2.34 bar to kPa.
- Atmospheric data is gathered at various altitudes and is presented in the following table.

| Altitude (km) | Mass of 1 L sample (g) | Pressure (mmHg) | Temperature (°C) |
|---------------|------------------------|-----------------|------------------|
| 0 | 1.20 | 760 | 20 |
| 5 | 0.73 | 407 | -12 |
| 10 | 0.41 | 218 | -46 |
| 20 | 0.13 | 62 | -53 |
| 30 | 0.035 | 18 | -38 |
| 40 | 0.009 | 5.1 | -18 |
| 50 | 0.003 | 1.5 | 2 |
| 60 | 0.0007 | 0.42 | -26 |
| 80 | 0.00007 | 0.03 | -87 |

| | | |
|------------|----------------------------------|-----------|
| CHAPTER 3 | Atmosphere and Pressure (cont'd) | BLM 3.2.7 |
| ASSESSMENT | | |
| | | |

3. cont'd.

- (a) Plot temperature (in Kelvin) vs. altitude. Describe the graph shape.
- (b) Plot pressure vs. altitude. Describe the graph shape.
- (c) Which graph exhibits a more consistent pattern?
- (d) How do pressure and mass of air change with altitude?
- (e) A plane climbs to 32,000 ft. Determine the data for the pressure, temperature and mass of air present at this altitude.
- (f) The atmosphere has 4 layers: troposphere, stratosphere, mesosphere, and thermosphere. Find the boundaries of these layers in km. Mark the two graphs created with these boundaries.
- (g) A weather balloon rises from an altitude of 0 km to 10 km. What changes in temperature and pressure are observed? What changes would this cause in the balloon?

| CHAPTER 3 | Atmosphere and Pressure (cont'd) | BLM 3.2.7 |
| ASSESSMENT | | |
| | | |

4. Show by substitution that pressure of a gas (P) depends upon the density of air (d), the height of the air column (h) and acceleration due to gravity (g). ($P = dgh$)

Use these equations : Force = mass \times acceleration due to gravity $F = mg$

$$\text{Pressure} = \frac{\text{Force}}{\text{Area}} \quad P = \frac{F}{A}$$

$$\text{Density} = \frac{\text{mass}}{\text{volume}} \quad D = \frac{m}{V}$$

5. How could you design an experiment to determine, like Blaise Pascal, that atmospheric pressure decreases with altitude?
