

## Investigation 9.A: Identifying Structures of the Excretory System Answer Key

### Answers to Analysis Questions

1. The diagram should resemble the one below. You will not be able to see the nephrons.

2. See the diagram below. You should identify that the glomerulus, glomerular capsule, proximal tubule, distal tubule, and top of the collecting duct are found in the renal cortex and that the nephron loop and collecting duct are found in the renal medulla.
