

BLM Answers

Get Ready

- $a = 55^\circ, b = 70^\circ, c = 70^\circ, d = 110^\circ$
 - $m = 90^\circ, n = 45^\circ, p = 27^\circ$
 - $m = 115^\circ, x = 45^\circ, y = 65^\circ, z = 70^\circ, w = 70^\circ$
 - $d = 60^\circ, e = 70^\circ, f = 50^\circ$
- Answers may vary. For example:

Since a and b make up a straight angle,
 $a + b = 180^\circ$ ①
 Since b and c make up a straight angle,
 $b + c = 180^\circ$ ②
 Subtract equation ② from equation ①
 to get $a - c = 0$, or $a = c$.
 Since c and d make up a straight angle,
 $c + d = 180^\circ$ ③
 Subtract equation ③ from equation ②
 to get $b - d = 0$, or $b = d$.
 Since $a = c$ and $b = d$, opposite angles are equal.

- 6.7 m
 - 8.1 cm
 - 8.4 mm
 - 7.1 km
- $\frac{5}{12}$
 - $\frac{1}{9}$
- $x = \frac{20}{7}$
 - $y = \frac{16}{3}$
 - $m = -5$ or 5
 - $x = -3$ or 2
- translation
 - rotation
 - reflection
 - dilatation

Section 7.1 Practice Master

- Order of vertices may vary. For example:
 - $\triangle DEF \sim \triangle PQR$
 - $\triangle JKL \sim \triangle STU$
 - $\triangle SRQ \sim \triangle STU$
 - $\triangle EAB \sim \triangle ECD$
- Answers may vary. For example:
 - $\triangle MNQ \sim \triangle OPQ$ because $\angle NMQ = \angle POQ = 90^\circ$ and $\angle MQN = \angle OQP = 90^\circ$ (common angles).
 - $\triangle PQR \sim \triangle TSR$ because $\angle PQR = \angle TSR$ (alternate angles) and $\angle QPR = \angle STR$ (alternate angles).
 - $\triangle ACE \sim \triangle BCD$ because $\angle AEC = \angle BDC$ and $\angle ACE = \angle BCD$ (common angles).
- Answers may vary. For example:
 - $\triangle ABC \sim \triangle DEF$ because the ratios of corresponding sides are all equal to 2:1.

- Using the Pythagorean theorem, $MC \sim 18.0$ cm.
 Then, $\triangle MCD \sim \triangle KMC$ because the ratios of two pairs of corresponding sides are equal to 2:1.
- $\angle BAC = \angle EDF, \angle ACB = \angle DFE, \angle CBA = \angle FED$;
 $BA:ED = AC:DF = CB:FE$
 - $\angle MCD = \angle KMC, \angle CDM = \angle MCK, \angle DMC = \angle CKM$;
 $MC:KM = CD:MC = DM:CK$
- Answers will vary.
- Answers may vary. For example: No. The three angles in a scalene triangle may not equal the three angles in another scalene triangle.
- width 8 in. length 12 in.
 - width 12 in. length 18 in.
 - width 2 in. length 3 in.
 - Answers may vary. For example: The area of each enlarged or reduced photo equals the area of the original photo multiplied by the square of the scale factor.

Section 7.2 Practice Master

-

- 4
- 20 cm, 48 cm

- area of first triangle 30 cm^2 ; area of second triangle 480 cm^2
 - The area of the second triangle equals the area of the first triangle times 16.
 - The area factor is equal to the square of the scale factor.
- $d = 12 \text{ cm}, e = 10 \text{ cm}$
 - $x = 9 \text{ mm}, z = 15 \text{ mm}$
 - $j = 12 \text{ m}, n = 15 \text{ m}$
 - $p = 10 \text{ km}, r = 12 \text{ km}$
- 6 cm
 - 4.5 m
- 81 cm^2
 - 100 m^2
- 21 m
