

Stay Safe Around Electric Wiring

To stay safe around electric wiring,

- ☒ Always handle electric cords only by the insulated covering.
- ☒ Always watch out for frayed cords with exposed wires.
- ☒ Never use an electric device with a damaged cord. Turn the device off and unplug it by pulling on the plug, not the cord.
- ☒ Never touch the conductor in an electric circuit with your body or with another conductor.

Without special instruments, you cannot always tell when an electric current is flowing in a conductor. Never touch exposed electric wiring!
