

Chapter 11 Gifted and Enrichment Answers

1. a) $p + 15b = 42b$

$$p = 42b - 15b$$

$$p = 27b$$

b)

2. a) Days = $\frac{(\text{Distance})}{\text{Speed}}$
24

b) Days to Mars = $\frac{(100\,000\,000)}{28\,000}$
 $\approx \frac{3571.4}{24}$
 ≈ 148.8

It would take the space shuttle about 148.8 days to travel from Earth to Mars.

3. a) Equations may vary. Example:

$M = 72(a - 160)$, where M is the money saved, in dollars, and a is Renu's age, in months.

b) On her 16th birthday, Renu will be $16 \times 12 = 192$ months old. Equations may vary. Example:

$$M = 72(192 - 160)$$

$$M = 72 \times 32$$

$$M = 2304$$

Renu will have saved \$3168.

4. a) $f = 0.044 \times s$, where s is the amount of soup, in millilitres, and f is the amount of fat, in grams.

b) $f = 0.044 \times 250$

$$f = 11$$

There are 11 g of fat in 250 mL of the soup.
